

1 Generate & split

A **q** First 5 months: \$100k total.
Next 45 months: 1.5× monthly cost.
Total project cost?

Reasoning

- e₁** 10 × 5 months = 50 months
- e₂** \$100k ÷ 5 = \$20k per month
- e₃** Later rate: 1.5 × \$20k = \$30k
- e₄** \$100k + 45 × \$30k = \$1.45M

... → Answer **\$1.45M**

2 Resample & measure

q + prefix	10 rollouts	Agree	Loss/token
q	→ ●●○○○○●●○○	5/10	0.141
q e₁	→ ●●●●○○●●○○	8/10	0.171
q e₁ e₂	→ ●●●●○○●●●●	9/10	0.172
q e₁ e₂ e₃	→ ●●●●○○●●●●	9/10	0.191
q e₁ e₂ e₃ e₄	→ ●●●●○○●●○○	8/10	0.126

3 Confidence

B **q** Speed: 60,000 km/s; onboard: 50 s.
Distance traveled in the Galaxy frame?

Reasoning

- e₁** Set $v = 60,000$ km/s and $t' = 50$ s
- e₂** $v/c = 0.2 \Rightarrow \gamma \approx 1.0204$
- e₃** $x' = vt' = 3.0\text{M km}$
- e₄** $x = x'/\gamma = 3.0\text{M}/1.0204$

... → Answer **2.94M km**

q	→ ○○○○○○○○○○	0/10	0.183
q e₁	→ ●○○●○○○●○○	3/10	0.282
q e₁ e₂	→ ●●○○○○○●○○	4/10	0.326
q e₁ e₂ e₃	→ ●○○●○○○●○○	3/10	0.270
q e₁ e₂ e₃ e₄	→ ●●○○○○○●○○	5/10	0.327

C Same wrong answer, different confidence signals

Same response as B

... $x' = vt' = 3.0\text{M}$...

... $x = x'/\gamma = 2.94\text{M}$...

Answer: **2.94M km**
